# TIPS to keep your PIPES from FREEZING

Beat Jack Frost this winter by following these six simple steps

**1**

Crank up the heat — at least 55°F inside

**2**

Drain pipes and hoses so water doesn't freeze

**3**

Insulate exposed pipes so they stay nice and toasty

**4**

Open cabinets so warm air circulates around pipes

**5**

Let faucets drip to keep water moving

**6**

Shut off the main water valve if you leave town

Talk to your REALTOR® to discuss any concerns you may have about protecting pipes and plumbing in your home during frigid winter temperatures.
